Friday 2nd October

Dear Dr Alison

I am writing to say thank you for your lovely assembly. Your assembly was really good. I loved learning all about science. Your assembly was amazing. It was so good I didn't want to leave your assembly. I really hope you can visit us again.

Best wishes,

love Sophie
Dear Dr Alison,

I am writing to say thank you so much for doing your fabulous assembly. It was great. I loved all your scientific experiment. I didn't have a favourite... I LOVED IT ALL!!! When I grow up I want to be a scientist. You are the best scientist I have ever seen. You should be on Britain Got Talent. They would give you 10 yeses! I loved every single bit. You should have a gargantuan statue so everyone can see it.

Best wishes, Hannah
Dear Dr Alison,

I am writing to say thank you for coming to our school. Thank you for doing a lovely experiment to be in an assembly. My favorite part was when you made the fake snow but it was like frost. I also liked it when you made the fire balls. The experiment was amazing. I hope you come back.

Best wishes,

Keisha

Friday 2nd October

Dear Dr. Alison,

I am writing to say thank you for coming to our school. Your assembly was amazing. My favourite part was when we switched the lights off and then the beautiful, amazing blue lights. Interestingly, I learnt that when you mix certain chemicals together, it makes a chemical reaction. I really hope you can visit us again. Best wishes,

Dear Dr. Alison,

I am writing to say how much your assembly was amazing, it was scientifically flabbergasting. My favourite part was when you poured the liquid into the glass and it was white and then when the light went out it turned blue.

I learnt that you should never ever stir things with your finger unless you are professionally trained. I really hope you can visit us again.

Best Wishes

Love from Jessica.
Dear Dr Alison,

I am writing to say thank you for coming to our school. I really enjoyed your assembly. I liked the part where you made all those foamy bubbles but my favourite part was when you put two liquids and mixed them together and the liquid they made together was a blue, glowing liquid. Also, remember when you mixed oxygen with a liquid and it turned blue and you wanted to do it for a second time because you liked its colour. I agreed because I liked the colour too. In fact it is my favourite colour.

Best wishes Connor R.
